EDUCATION

- 2026 - PRESENT (M.ENG)

UNIVERSITY OF SILESIA IN KATOWICE

Faculty: Science and Technology

Program: Computer Science

- 2022 - 2026 (B.ENG)

SILESIA UNIVERSITY OF TECHNOLOGY

Faculty: utomation, Electronics, and
Computer Science

Program: Computer Science

SKILLS

Programming

- Python
- JavaScript
- C++
- SQL
- Bash

AI & Automations

- LLMs
- n8n
- Zapier
- Voiceflow
- RAG
- Prompt Engineering

DevOps & IT

- Linux
- Docker
- Git
- CI/CD
- Nginx
- SSH
- Github Actions
- Beszel

PROFILE

Computer Science Engineer (B.Eng.) specializing in custom autonomous agents, CI/CD pipelines, and business process automation. Graduate of the Silesian University of Technology with a strong track record in Python, LLM integration, and server management. Adept at translating complex requirements into scalable solutions. Currently pursuing an M.Eng. in Computer Science.

WORK EXPERIENCE

Devesol

06.03.2026 - PRESENT

Software & DevOps Engineer

- **Technical Leadership & Consulting:** Act as a key technical advisor, strategic evaluator, and consultant for business growth. Successfully pitched and architecturalized core technology stacks and innovative project ideas that were fully adopted and implemented.
- **Custom Enterprise Solutions (TMS & MES):** Developed tailor-made internal software solutions (TMS, MES) utilizing **Python (FastAPI)** and **Vue.js**, substantially reducing operational bottlenecks and optimizing team resource allocation.
- **Infrastructure & CI/CD Engineering:** Provisioned and managed scalable bare-metal and cloud server infrastructure leveraging **Ubuntu server**, **Debian**, **Docker**, and **Nginx**. Built automated **GitHub Actions CI/CD** pipelines to guarantee zero-downtime deployments.
- **Advanced Conversational AI & Automations:** Designed, pitched, and delivered end-to-end intelligent chatbot ecosystems by integrating Typebot frontends with complex **n8n** backend orchestrations and **PostgreSQL / Vector Databases**.
- **Observability & Incident Response:** Engineered a custom internal error-tracking and alerting system (**Python**, **Vue.js**) and proactively monitored client server health using **Beszel** and **Bash**, ensuring minimal downtime and rapid issue resolution.
- **Disaster Recovery & Redundancy:** Architected automated, encrypted database backup pipelines with multi-layered redundancy, including secure off-site replication (e.g., Dropbox) to enforce strict data integrity and organizational security standards.

autoMEE

03.02.2025 - 12.12.2025

Junior AI & Automation Support

- **Client Consulting & Technical Partnership:** Acted as a dedicated technical partner for international B2B clients (UK, Poland, Ukraine). Conducted needs analysis, proposed tailored technical solutions, and provided continuous account management and support.
- **Conversational AI & Lead Generation:** Designed and deployed intelligent chatbots (**Voiceflow**) and automated lead-generation workflows (**GoHighLevel**), implementing proactive web triggers to capture customer contacts and boost conversion rates.
- **Complex Business Automations:** Delivered end-to-end automation pipelines (**n8n**, **Zapier**) connecting diverse business systems, including e-commerce (**PrestaShop**), accounting (**Saldeo**), and workspace tools (**Google Drive/Sheets**), streamlining daily operations.
- **RPA & Custom Web Scraping:** Engineered Robotic Process Automation (**RPA**) scripts and custom web scrapers to bypass API limitations (automating manual UI interactions), deployed on self-provisioned **Linux servers**.

- Virtualization (Proxmox, KVM, LXC)
- VM's

Web Development

- FastApi
- Vue.js
- RESTful APIs

LANGUAGES

- Polish (Native)
- English (Fluent)

- **Infrastructure Administration:** Set up and administered remote **Linux server** environments to host custom automation services, managing secure access protocols (**SSH, VNC**) and **VPN** configurations.

● Giganci Programowania 10.01.2025 - 21.07.2025 Programming Trainer for children and teenagers

- **Technical Mentoring & Communication:** Translated core computer science concepts and Python programming principles into accessible, engaging lessons, demonstrating strong communication and presentation skills.
- **Adaptability & Custom Learning:** Designed flexible learning paths tailored to individual students' comprehension levels, adapting teaching methods to diverse audiences.

SELECTED ENGINEERING PROJECTS

- **AI-Driven Computer-Use Agent Platform (B.Eng. Thesis):** Architected and engineered a proprietary, commercially funded web platform (**Python, Flask, MySQL**) for managing and generating **desktop automation bots** without API access. Implemented a natural language-to-action configuration engine utilizing the **OpenAI API** and engineered a secure, Fernet-encrypted backend to export standalone executables (.exe).
- **High-Performance Image Processing (C# & Assembly):** Engineered a **multithreaded** Color Blindness Simulator. Implemented core image processing algorithms using low-level **Assembly** vector instructions, comparing execution times with **C#** to demonstrate significant performance optimizations.
- **Full-Stack & Containerized Applications:** Developed a role-based Warehouse Management System and built **dockerized** web interfaces (e.g., FormForge Web Client), applying modern containerization practices and robust backend design (**Python/Java, Docker, HTML/JS**).
- **CI/CD & Game Development:** Rapidly prototyped cross-platform applications (including **Unity C#** and **Python** games like "Recrawler"), implementing fully automated **GitHub Actions** pipelines for seamless builds and deployments.

COURSES COMPLETED

- CCNA: Introduction to Networks – Cisco Networking Academy (University of Silesia) | Jun 2026
- Unit Testing in Python (unittest framework) – Udemy | Nov 2024
